

Energy Management Policy

Hemerdon Mine, Drakelands, Plympton, Devon PL7 5BS

Tungsten West plc is aware of its environmental contributions, in particular its energy performance of the facility and its operational processes. The organisation strives for continual improvement of its processes and procedures to reduce its energy consumptions to not only save cost but to reduce its carbon-foot print.

The organisation has implemented an Energy Management System in accordance with ISO 50001:2018 and has taken into consideration its activities to meet the needs and expectations of its interested parties.

The energy management system analyses the use of gas, electricity, fuel and water usage to capture significant energy users so they can be monitored and managed. The scope of this management system applies to all areas of the business:

The production and provision of aggregate materials and management of care and maintenance package for site operational health and safety Requirements.

Top management are committed to:

- Fulfilling all legal and regulatory requirements including that of interested parties such as the Environment Agency.
- Encourage training and awareness on energy management for employees; to ensure relevant competence and knowledge to maintain the management system.
- Communicating the commitment to energy improvement initiatives.
- Setting annual Energy Management objectives and monitoring performance.
- Ensuring information and resource is available and appropriate to draw conclusions on energy performance and objectives and targets to make informed decisions.
- Promote rational usage and efficient use of natural and energy resources and to implement activities aimed at the reduction, reuse, recycling and efficiency in our business.
- Acquiring energy efficient goods and services and consider process design to maximise energy efficiency.
- Ensuring the continual improvement of energy performance and the Energy Management System.
- Ensuring products and services are being purchased with energy management at the forefront which may hinder Tungsten Wests energy improvement initiatives.

This policy will be communicated within the organisation and will be available on request for all interested parties.
